OSTIARY

Visitor management solution with temperature screening and facial recognition options

ALL-IN-ONE

NOT JUST HARDWARE OR SOFTWARE, BUT THE SOLUTION

COVID-19 PROTECTION

THROUGH TEMPERATURE SCREENING AND MASK-WEARING DETECTION

OSTIARY does it remotely through a high-speed thermal camera and contactless face detection module. The solution keeps personnel distant from visitors, thus, slowing down the COVID spread within the company.

SECURITY STAFF OPTIMIZATION

THROUGH AUTOMATED IDENTITY AND TEMPERATURE CHECKS

With OSTIARY, one guard is enough to keep any number of visitors under control. When the system does routine checks, there are no human errors, and guards are focused on protection.

VISITOR CONTROL CENTER

WITH NO INVESTMENTS IN SPECIAL HARDWARE. YOU ONLY NEED A LAPTOP

OSTIARY captures visitors' data at every entrance and sends it to HAZER app that we offer for laptops and mobile devices. HAZER offers the visitor management dashboard, real-time alerts, and reports with visitors' data for up to 400 days.

ACCESS AND ATTENDANCE RECORDING

THROUGH A PRECISE FACE ID

OSTIARY reads visitors' faces, checks authorizations, and records attendances even if people move at high speed, in the crowd, and at a distance. The solution instantly alerts guards about unauthorized access and provide attendance records for up to 400 days.

MULTI-ENTRANCE MONITORING

BY COMBINING MULTIPLE OSTIARY UNITS

Unlike the guards distributed across the building or area, several OSTIARY units act as one. Perfectly synchronized, they interchange visitors' data and send it to the central control point in real-time.

ALERT AND NOTIFICATION CENTER

ON ANY DEVICE THROUGH THE FASTEST IOT PLATFORM

OSTIARY warns the guards if somebody is not wearing a mask, has a high temperature, or entered an area without authorization. It happens in milliseconds and shows the location of the violation.
